

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE
Transcriber's Office
FLOOR DEBATE

April 25, 2001 LB 536

neither of them.

SENATOR WEHRBEIN: Okay. Thank you.

SENATOR CHAMBERS: That was good though.

SENATOR WEHRBEIN: (Laugh)

SPEAKER KRISTENSEN: Senator Beutler.

SENATOR BEUTLER: Senator Chambers, as long as we're kind of all chatting back and forth and talking about things while time goes by, let me try out a couple of ideas on you and ask you if you've given any thought to some distinctions along these lines. Is it possible that there's a difference between subsidies; that not all subsidies are the same; that some have a future, in a sense, and some don't; that some, for example, you might call a sunrise subsidy in the sense that perhaps we're encouraging technologies, perhaps we're encouraging markets, we're encouraging things that might lead to a future that is independent of the subsidy and, in that sense, leading to a sunrise; that wind energy, for example, might be another such thing; that ethanol production might be another such thing; and that there are other subsidies that you might call sunset subsidies that are really just mitigating the end of something and not creating a future; and that really today, in this world, the federal subsidy that's coming down to farmers isn't help...helping to create anything; it's simply mitigating the demise of agricultural society in Nebraska as we know it? And so the choice is between different kinds of subsidies. It's not a choice of subsidy versus free market. The federal subsidy is there. It's a sunset subsidy. It's leading nowhere except just protecting against distinction, and what we should be doing to counter that subsidy and, in fact, to some day end that subsidy is being...is to encourage sunrise subsidies such as the creation of ethanol markets and an ethanol future and wind energy and wind energy future, renewable energy future. Those are, in my opinion, good kinds of subsidies to the extent that...that there is a distinction. So tell me why in this real world out there, where agriculture is totally subsidized by the federal government with sunset subsidies, why would we not be
